

Memory Matching Flutter Game

A Flutter-based memory matching game for iOS and Android.

Project Structure

The project is organized so the game code is easy to read and maintain.

Main Folder Layout

```
memory_matching_game/
|-- android/                Android Studio and Gradle project files
|-- assets/icons/           Source launcher icon image
|-- assets/images/         Real photo-style card images
|-- ios/
|-- lib/
|   |-- main.dart           Minimal Flutter entry point
|   |-- src/
|       |-- app.dart        App theme and setup
|       |-- models/game_models.dart
|       |-- screens/memory_game_page.dart
|       |-- screens/start_screen.dart
|       |-- widgets/
|           |-- confettiPainter.dart
|           |-- game_cards.dart
|           |-- game_dialogs.dart
|           |-- game_header.dart
|-- screenshots/
|-- test/widget_test.dart
|-- web/   |-- windows/   |-- macos/   |-- linux/
|-- pubspec.yaml
|-- README.md
|-- README.pdf
|-- memory_matching_game_solution.zip
```

Main Dart Files

main.dart starts the app. app.dart sets up the Material theme.

models contains card themes, difficulty settings, and score data.

screens contains the start screen and the main gameplay state.

widgets contains reusable cards, headers, dialogs, and confetti drawing.

Verification Status

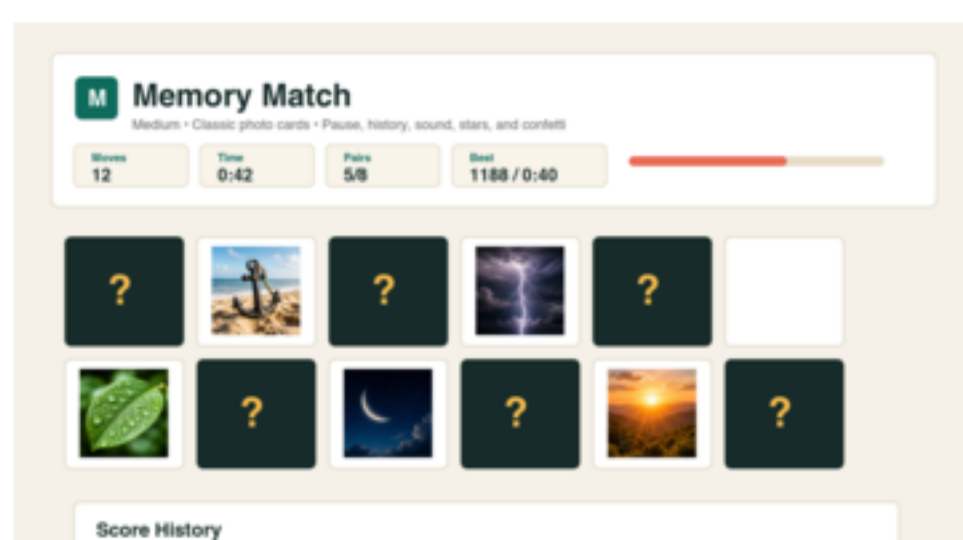

flutter analyze: passed with no issues.

flutter test: passed.

flutter build apk --debug: Android debug APK built successfully.
